REST API

MySQL

MongoDB

SQLite

JWT

Linux

Git

PROJECTS

E-commerce Laravel & React

A full-stack web application built with a Laravel (API) backend and React.js frontend, featuring role-based authentication, Laravel Sanctum, middleware, CRUD operations, order processing, checkout, order confirmation, and payment gateway integration. API communication between Laravel and React uses fetch with the useEffect hook, React Router DOM, useState hook, protected routes in React, and a responsive UI styled with Tailwind CSS.

Inventory Management System with Laravel

Developed an **Inventory Management System** using **Laravel**, featuring **product, category, and brand management**, **order processing**, **authentication**, **PDF reporting**.

Lomeo E-commerce with laravel

Developed an **e-commerce** platform with Laravel, including role-based **authentication** (Laravel Sanctum), **middleware** for protected routes, **order processing**, **order confirmation**, and **Stripe** payment gateway integration. Implemented **search**, **pagination**, **email notifications**, and **file uploads** using **Dropify** and **Dropzone**. Designed an **admin dashboard** for managing **categories**, **brands**, **products** management, and **sliders**, **Integrated shopping cart**.

Book Store with MERN

Built projects with **Firestore Authentication** (Google & GitHub login), integrated **Facebook Messenger**, developed an **Age Calculator**, and worked with **APIs** for dynamic data handling.
